

## SNAKE BITE RESCUE, REHABILITATION AND RESEARCH CENTRE- KENYA (SNABIRC-KENYA)

Snakebite is a rampant problem in rural Kenya especially in hot areas where poisonous snakes are mostly found. The access to a health facility is usually not easy and the availability of anti-venom is not always guaranteed. The Cost of anti-venom is also beyond the reach of most people and more so because snake bites require emergency treatment. By availing anti-venom to even the most local health centres, many lives can be saved. By rehabilitating those that become disabled, especially the children, their lives change for the better.

*Join us in this worthy cause to save and to change a life*

Snake bite wounds take very long to heal and require proper dressing and proper antibiotics for it to heal properly and speedily.

## OUR WORK

We work in 5 counties and our work involves

- Provision of snake anti-venom
- Rehabilitation of those that become disabled as result of snakebites
- Rehabilitation of those who become visually impaired as a result of snake attack.
- Community training on snakebite prevention and First Aid
- Contribution to Research

## SUPPORT US/DONATE

Please support our work by donating to

- Purchase anti-venom
- Rehabilitate a child
- Capacitate the research centre
- Community Empowerment
